

Task: Design an "Online Registration Form" (HTML5 Native Validation)

Description:

Build a clean, semantic "Online Registration Form" using **HTML5 only** (no JavaScript required). Your goal is to leverage built-in HTML attribute validation to enforce data constraints directly in the browser.

● Deliverable_1: A registration.html

■ Fields & Requirements:

1. **Full Name (<input type="text">)**
 - Must be required (**required**).
 - Must accept only letters and spaces (Hint: use **pattern="[A-Za-z\s]+"**).
 - Include a custom hint using the **title** attribute to explain the format if validation fails.
2. **Email Address (<input type="email">)**
 - Must be required (**required**).
 - Use the correct HTML5 **email** input type to trigger built-in browser format checking.
3. **Mobile Phone Number (<input type="tel">)**
 - Must be required (**required**).
 - Must be all numbers and starts with 09. 10 digits in total and in format of 0911-111-111, i.e. using '-' as delimiter.
4. **Event Date (<input type="date">)**
 - Must be required (**required**).
 - Apply **min** and **max** attributes to restrict selection (e.g., allow dates only within the current year or month).
5. **Submission (<button type="submit">)**
 - Include a standard submission button to allow browser validation popups to trigger automatically upon submission.
